

NxHE SERIES

TWO-STAGE 90-260KW

In 2021, a new packaging company was built in Tulsa, Oklahoma. The facility is 540,000 sq ft and is a climate-controlled building running two 10-hour shifts Monday through Friday. This company produces cardboard boxes with printed logos for Amazon and other brands.

This brand-new facility came to us with exactly what they needed to run effectively and efficiently. From their requirements, FS-Curtis supplied two NxHE compressors for their operations. Now, the North and South Hall at the facility are home to two NxHE 260 VSD.

The two compressors are still running smoothly today due to a strategic maintenance schedule.
